

Forecast Sensitivity: Delphi

LOO % change in forecasted loss when each training budget is dropped

Figure 1: Forecast sensitivity via leave-one-out (LOO) over training budgets. Loss at 1e21/1e22/1e23 FLOPs predicted by:

Approach 2 power law $L = x_1 D^{x_2} + x_0$ fit to parabola minima; Approach 3 surface $L = A/N^\alpha + B/D^\beta$ ($E=0$) evaluated at true (N, D) .

Table shows signed % change when each training budget is dropped. LOO μ %| = mean of unsigned % changes across all LOO drops.
